

# Resolve time-consuming identity management tasks with Tenable + Red Hat Ansible

## Take the time, risk and complexity out of identity management

As an organisation's IT infrastructure grows in complexity and scale, so too does the role of the IT team. Today's IT professionals must complete a myriad of daily tasks, many of which are urgent. Identity management is particularly time-consuming for most IT teams—whether it's setting up new accounts, manually searching for and removing redundant accounts, or defining and setting access privileges. And when things get busy, it's often one of the areas that gets sidelined in favour of more critical tasks.

When identity management is de-prioritised, it's very easy for inactive accounts to pile up, resulting in sizable security and compliance gaps. A lack of robust identity management can also mean the organisation is paying far more for its per-user software licenses than is necessary.

While there are plenty of solutions which alert IT teams to identity management problems in their infrastructure, there are few which offer effective, end-to-end resolution. This is where Advent One comes in.

"There are countless tools that now tell you what is going wrong in your IT environment – but few help with the end-to-end resolution. Our solution gives you a way to both accurately identify issues using Tenable Identity Exposure, and then respond quickly and accurately, with automated processes enabled by Red Hat Ansible"

**Wayne Glynne**

Head of Cybersecurity, Advent One

Identity Exposure

## Close the loop between identification and action

Advent One can evolve your organisation's approach to identity management by providing a seamless, end-to-end solution.

This incorporates both Tenable Identity Exposure – for the rapid, reliable monitoring and identification of any security or identity issues – and Red Hat Ansible, which enables their automated resolution.

- **Continual monitoring** – Tenable Identity Exposure ensures 24/7 monitoring of your infrastructure, and immediately alerts you to identity issues which need resolving. This could include the presence of unused ('sleeper') accounts or illegitimate requests for additional access privileges.
- **Automated resolutions** – once an issue has been detected, Red Hat Ansible enables rapid and accurate remediation, as per your organisation's processes, without necessarily involving IT staff.
- **Fully customised** – the solution is completely tailored to your organisation's specific needs and processes.
- **Rapid onboarding** – setting up new employee identities, and configuring access privileges can be largely automated, which frees your IT team to focus on other initiatives.
- **Quick time to value** – our pre-existing playbooks offer a rapid way to automate your identity management processes, without the need to create new playbooks from scratch.
- **Detailed audit trail** – every action is accurately recorded within the solution, for tracking, potential analysis, and compliance.
- **Reduced workload** – free your IT teams from error-prone, time-consuming tasks, allowing them to focus on innovation.
- **Enhanced compliance** – consistent, repeatable processes remove the threat of configuration drift and lower the risk of non-compliance.
- **Enhanced security** – shutting down redundant user accounts, and ensuring the correct level of permissions, removes the risk of them being leveraged by cybercriminals.

## Technology used

- Red Hat Ansible Automation Platform
- Tenable Identity Exposure

## Key benefits:

- Streamline IT workload.
- Enhance security by removing unused accounts and fine-tuning access privileges.
- Save licensing costs by 'turning off' unused accounts.
- Fast-track user onboarding and identity management.

Advent One is proud to be a Red Hat Premier Partner.

Advent One is a multi-award winning Red Hat partner and recognised globally for their leading Red Hat Ansible Automation practice.

### Recent awards include:

- 2023 Innovation Partner of the Year, ANZ
- 2022 Innovation Partner of the Year, ANZ & APAC
- 2021 Professional Services Partner of the Year, ANZ
- 2020, Advanced Partner of the Year, ANZ

## Why Advent One?

- **Expertise** – due largely to the quality of our engineering team, Advent One is one of two Australian-based companies to have achieved Red Hat Premier partner status, the highest level in the Red Hat Partner Program.
- **Single bill of materials** – Advent One can simplify the process and manage your entire solution on your behalf, including your Tenable and Red Hat subscriptions, so you have just one bill for all components.
- **Industry-leading technology** – Advent One's solution brings together reputable, stand-out technology: Red Hat Ansible Platform and Tenable.
- **Managed Services Partner** – Advent One is immersed in operating many client environments, which gives us the experience to deliver a highly automated IT operations environment.
