

Modernize the integration framework

Red Hat & Soaint

The evolution of technologies, **based on Apache Camel**, delivers new alternatives and options to our clients. **Soaint** relies on **Red Hat** technologies to deliver a solution that allows its clients to take advantage of Apache Camel's new features.

Common use cases

- *Evolve from Fuse to a new integration solution.*
- *Work with integration in the cloud-native era.*
- *API integration and monetization*

Powered by Red Hat Solutions.

- *Red Hat Enterprise Linux*
- *Red Hat Application Foundation*
- *Red Hat OpenShift*
- *Red Hat OpenShift Managed Services.*

Soaint helps you to successfully evolve your data integration framework. Delivering new tools to your innovation projects, powered by Red Hat solutions.

Whether you want to give continuity to your Fuse solution, you are looking for an integration framework optimized for cloud-native development, you need the new features of the latest versions of Apache Camel or you want to implement an API-centric integration framework, Soaint and Red Hat can support you.

The Future of Fuse

Application Development is evolving as the modern Hybrid Cloud and cloud-native architectures drive new demands on applications. As a part of this continual evolution, Red Hat Fuse evolved to the Red Hat build of Apache Camel, allowing you to address a broader set of modern customer deployment use cases.

Soaint will help you in the review, migration and support of new tools that allow you to take full advantage of the capabilities of new technologies along with opening a range of new possibilities.

We know there is work invested in your current solution and we want to help you in the transition, taking advantage of the existing and new features available.

Soaint can offer an assessment to accelerate the transition between Fuse and the emerging technologies that could be needed.

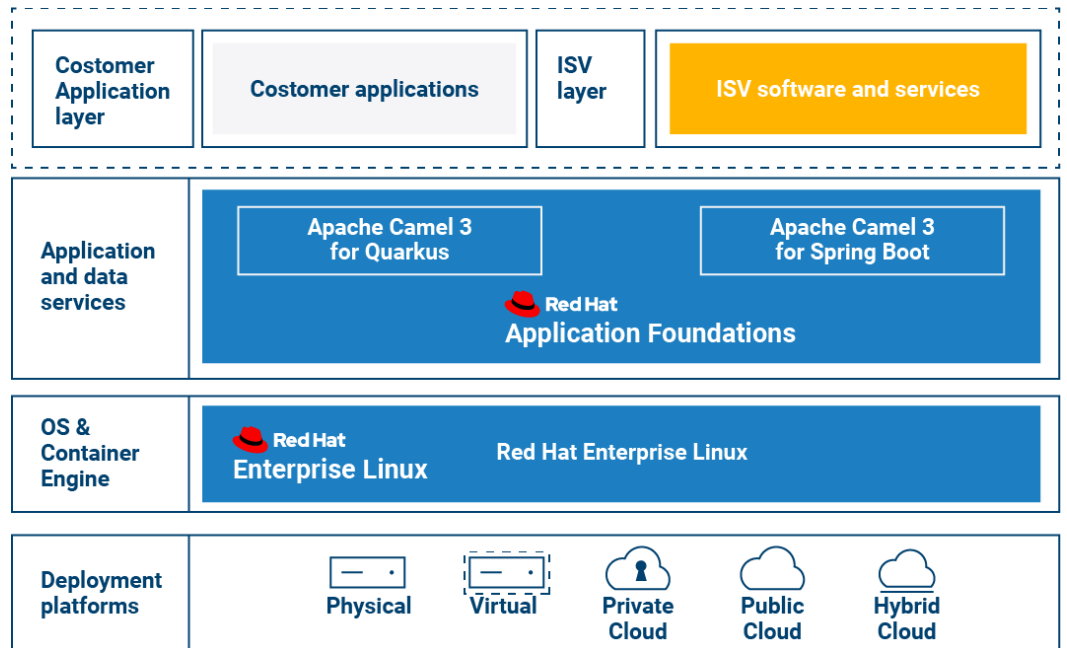

A framework for the cloud-native era

The reality of hybrid work platforms, on-premise, public and private cloud requires tools that adapt and deliver the necessary flexibility so that we can work in these environments without interruptions, taking advantage of the benefits that each platform provides.

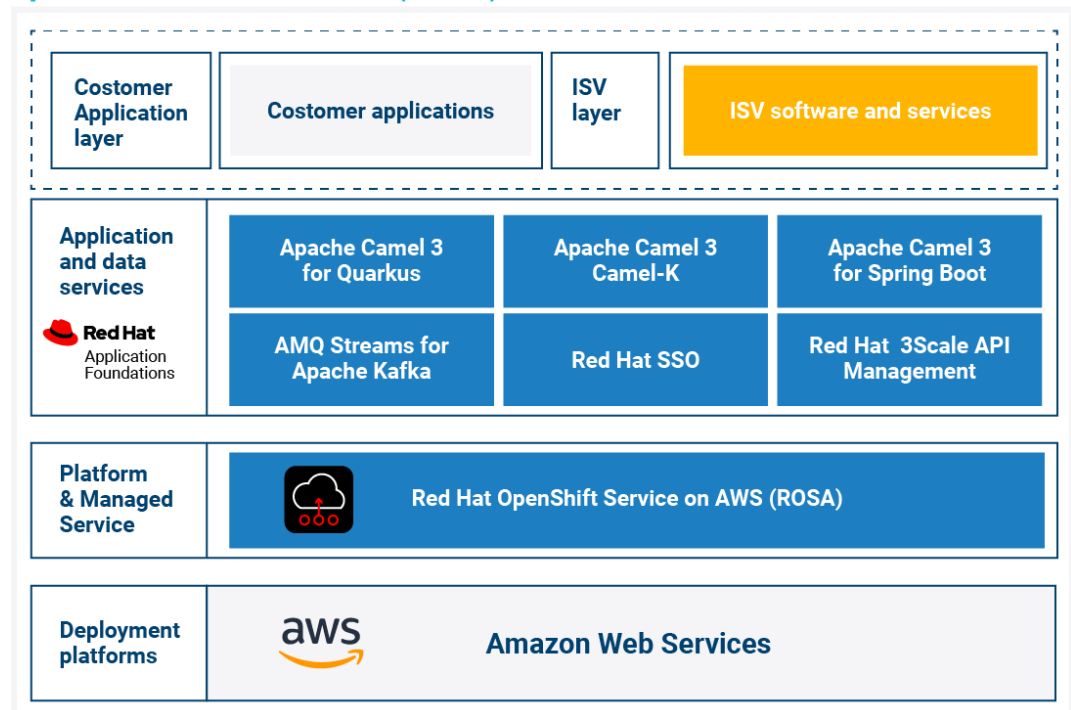

Thinking in a cloud-native, containerized way, we designed this solution. It allows an integration framework for both traditional and containerized solutions. Offering the possibility of evolution or transition to the new functionalities available.

- API-centric
- Container-based integration
- Hybrid Cloud deployment supported
- Camel Extensions for Quarkus, Camel K and Camel Spring Boot
- Perfect complement for your Kafka tools.

Integration framework on top of RHEL

Or i.e on top of a OpenShift Managed service on AWS | Red Hat OpenShift Service on AWS (ROSA)
