# Streamline, strengthen and simplify with Integra's Automated Firewall Management solution

## Take the time, cost and complexity out of ongoing firewall maintenance

As cyber threats increase in scope and severity, IT teams are under growing pressure to deliver effective, robust security. While firewalls can play a key role in an organisation's defenses, they require constant maintenance and monitoring to ensure effective blocking and mitigation of external threats. Establishing and maintaining firewall policies can become particularly complex, especially in larger organisations which have multiple firewalls in place.

This is where Integra's Automated Firewall Management Solution can help.

## Simplify and streamline your approach to 'border security' with Integra

Built on the Red Hat Ansible Automation Platform, Integra's Automated Firewall Management Solution takes care of day-to-day firewall management and maintenance, alleviating pressure on your IT team, and ensuring robust, reliable security across your organisation.

Integra's Automation Firewall solution is proven to reduce the time taken to complete typical firewall maintenance tasks: from **up to three days** to less than **two hours**.

## Why choose Integra for your firewall management?

- **Improve efficiency for your IT team** – automate time-consuming manual tasks, removing reliance on specialist firewall technicians, and enabling your IT team to focus on more strategic work.
- **Easily integrates with core business systems** – seamless connection with ServiceNow, LDAP, SMTP and Git, as well as with firewall endpoint devices from Fortinet, VMware, NSX, Cisco, Checkpoint and Palo Alto Firewall.
- **End-to-end workflow** – gain control over every aspect of your firewall maintenance, with RBAC, customer approvals, notifications and status dashboards all incorporated.
- **Ongoing support** – the Integra team works with you at every step, providing the design, deployment and maintenance of your solution.
- **Customised to your organisation** – our solution is fully adaptable to your unique firewall management and maintenance processes, using Python to build and parse input and output.

Integra recently delivered our market-leading Automated Firewall Management Solution for a global communications provider, which supports over 491 million customers in 17 countries across South Asia and Africa. The business was already using the ServiceNow platform, and we integrated our solution with existing APIs to deliver an end-to-end automation platform. As a result, the manual work which was taking between 3-7 days has come down to less than 3 hours with manual approvals in place.
